WHEN 20/20 VISION JUST ISN'T ENOUGH

Enriching macular pigment with all three macular carotenoids will optimize contrast even in patients with "perfect" visual acuity.[1]

When identifying faces, signs and objects contrast sensitivity measures at 6 c/deg is the best predictor of real world vision.[2]

INCORPORATING MACUHEALTH'S CUSTOMIZED CONTRAST SENSITIVITY APP INTO M&S TECHNOLOGIES' SMART SYSTEM WILL PROVIDE FOR PATIENT ASSESSMENT OF:

- REAL WORLD VISION UNDER ALL CONDITIONS
- VISUAL IMPACT OF AN UNDERLYING PROBLEM ON VISUAL FUNCTION
- AMBLYOPIA
- AGE-RELATED MACULAR DEGENERATION
- CATARACTS
- CORNEAL EDEMA
- DRY EYE
- GLAUCOMA
- KERATOCONUS
- MACULOPATHY
- OPTIC NERVE PATHOLOGY
- LOW MACULAR PIGMENT OPTICAL DENSITY AND VOLUME
